

UNIVERSITY OF PRETORIA

DEPARTMENT OF FACILITIES MANAGEMENT

ENVIRONMENTAL POLICY

1. Purpose

The purpose of the environmental policy of the University of Pretoria is to provide a systematic framework for environmental management commitments and to promote environmental sustainability.

2. Organisational scope

The environmental policy is a University-wide policy which applies to all staff members, students and contractors. The University of Pretoria, as a leading research-intensive tertiary education institution, has a complex structure, and the intention of this policy is to provide a framework for regulating and monitoring all interactions of the University's many components with the environment, including any action that impacts on the environment or has the potential to affect the environment in any way.

3. Policy statement

The University of Pretoria is committed to adopting environmentally responsible practices by:

- ensuring compliance with relevant legal and other requirements,
- improving its policies and practices continually to adapt to the dynamic environment in which the University operates,
- preventing pollution as far as practically possible, and
- fostering environmental sustainability.

The University of Pretoria aims to address these commitments through taking the following actions where reasonable and practical in a financially viable manner:

3.1 Academia

a. Research

Conducting research into environmental issues such as sustainability and environmental accountability.

b. Teaching and learning

Teaching and learning students in such a manner that they are equipped to become environmentally responsible citizens and future leaders.

3.2 Facilities Management

a. Resource management

Implementing environmentally sound practices in the sustainable utilisation of resources.

b. Energy

Identifying, monitoring, regulating and reviewing all aspects related to the energy consumption of the University, and adopting practices to conserve energy and reduce energy consumption.

c. Water

Establishing systems to monitor the quality and quantity of water consumed and discharged, and adopting practices to conserve and reduce the use of water resources.

d. Travel and transport

Managing travel and transport efficiently in order to promote travel and transport practices that have a lower impact.

e. Existing infrastructure

Implementing best practices in environmental management in order to operate existing infrastructure in a more sustainable manner.

f. New infrastructure

Applying environmentally responsible principles in the design of new infrastructure projects.

g. Biodiversity

Improving the biological effectiveness of the environment of the University.

h. Air quality and carbon emissions

Ensuring that legal requirements are maintained for air quality, and acting in a responsible manner when addressing carbon-emission issues.

i. Effluents

Identifying effluent-producing activities, and managing these activities in an environmentally responsible manner in order to achieve a reduction in effluent output.

j. General waste

Adhering to the principle of “Reduce, Reuse and Recycle” and adopting the principle of “Prevent, Minimise or Control” in respect of waste management.

k. Hazardous waste

Ensuring that hazardous waste is managed in such a manner that negative impacts are prevented, minimised or controlled in accordance with the relevant legal requirements.

l. Emergency preparedness

Safeguarding against environmental emergencies by ensuring that regulations are adhered to, and by being adequately prepared to manage environmental emergencies efficiently and effectively should they occur.

m. Environmental Management System (EMS)

Establishing and operating an Environmental Management System that effectively manages any activity, product or service that has, or may potentially have an environmental impact. The EMS will ensure that these activities, products and services are identified, managed, monitored and reviewed to facilitate continuous improvement in the environmental performance of the University.

n. Compliance and best practice

Ensuring compliance with legal and other requirements and monitoring and reviewing the environmental performance of the University on a regular basis.

o. Heritage

Protecting and preserving the cultural, built and natural landscape of the University.

3.3 Other Support Services

a. *Procurement*

Incorporating the principles of green procurement in procurement policies.

b. *Risk Management*

Conforming to international standards in the internal processing and management of emerging and current risks, in order to minimise potential and actual negative environmental impacts.

c. *Communication*

Communicating applicable environmental matters to all stakeholders including staff members, students, contractors and suppliers. Advocating alternatives to physical travel, such as electronic communication and video-conferencing.

d. *Stakeholder engagement*

Engaging in partnerships with stakeholders in environmental projects, and increasing environmental awareness among staff members, students, contractors and suppliers in order to encourage socially responsible behaviour.

4. Definitions and abbreviations

Environment	The surroundings in which the University operates, including air, water, land, natural resources, flora, fauna, humans, and their interrelation. The surroundings in this context extend from within an organisation to the global system.
EMS	Environmental Management System refers to that part of an organisation's management system which is used to develop and implement its environmental policy and manage its environmental aspects. A management system is a set of interrelated elements used to establish policy and objectives and the means to achieve those objectives. A management system includes an organisational structure, planning activities, allocation of responsibilities, practices, procedures, processes and resources.
Environmental aspect	Element of an organisation's activities or products or services that can interact with the environment.
Environmental impact	Any change to the environment, whether adverse or beneficial, wholly or partially resulting from an organisation's behaviour.
Sustainability	The integration of social, economic and environmental factors into planning, implementation and decision-making so as to ensure that development serves present and future generations; i.e. meeting the needs of the present without compromising the ability of future generations to meet their own needs.

None

5.4 Appendices

None

6. Responsibilities for implementation

The Executive Director responsible for Facilities Management will be responsible for the University-wide implementation of this policy.

7. Policy life cycle

The University of Pretoria as the owner of the policy shall consider the policy for review two years after approval, or earlier if required.
