Collaborative Workshop on Big Data Analysis of COVID-19

CSIR International Convention Centre

Hosted by SEPIMOD: This research team, which started at the onset of the COVID-19 pandemic in 2020, aims at spatial epidemiological modelling, which considers spatial covariates such as vulnerability, mobility, gender, age, comorbidities, and health care access, when assessing and fitting epidemiological models.

The SEPIMOD group consists of members across several institutions and disciplines and have been working on COVID-19 modelling in South Africa since the start of the pandemic. The team has expertise in statistical modelling, spatial analysis, GIS, programming, and epidemiology.

Details

The aim of this workshop is to bring together researchers, in South Africa and internationally, who have been involved in COVID-19 modelling to share research. There are several invited speakers already, namely Prof. Sheetal Silal, UCT and Prof. Bruce Mellado, WITS, as well as the research output of the SEPIMOD team.

If you would like to attend online [please apply here](#).

Deadlines: Saturday 28 May 2022 for online sign-up.

Enquiries: [Inger Fabris-Rotelli](#)

The workshop is funded by IDRC under the Africa-Canada Artificial Intelligence and Data Innovation Consortium.
