

Large sebaceous cysts

Dr.P.T.Kenny.

Management of large sebaceous cysts.

- Excising a large sebaceous cyst could leave a long, unwanted scar.
- In stead of primarily removing a large cyst, rather make a small incision and expel the content.
- Instruct the patient to return for complete excision of the recurring cyst when it reaches a size of, for example, 2cm in diameter.
- Removal will be easier, with a much smaller scar.
