

Breast Cancer awareness in South Africa

Challenges

Breast cancer remains the most common form of cancer amongst women in South Africa and there is a big need for support and basic education at the diagnostic and therapeutic centres working with women who are affected by breast cancer. Rural villages lack the support and information to make informed decisions regarding the treatment journey for these women.

Our purpose at Breast Cancer Support Pretoria NPO is to provide support, education and awareness of this disease.

Community opportunities and impact

We reach over 45 000 women across South Africa annually.

We host local community outreaches in the form of cancer talks (tea events) with local speakers/specialists working in the field of oncology, sharing information and providing support.

We host a Cancer Care Package campaign where info packs and support items are sent to local oncology centres to aid women during their breast cancer journey.
