

## Climate change and one health: Evidence, priorities, and challenges from India and South Africa: a gLOCAL solution room

### [REGISTRATION LINK](#)

**4<sup>th</sup> June ,2024**  
(13:30- 17:20 Indian time)  
10:00-14:00 (South African time)

With the increase in population, industrialization, and geopolitical problems, global changes are accelerating which damage the biodiversity, ecosystems, and migratory movements of both humankind and species in general. Rapid climate and environmental changes have led to the emergence and reemergence of infectious and noninfectious diseases.

One Health (OH) is a collaborative, multisectoral, coordinated, and transdisciplinary approach – working at the local, regional, national, and global levels – with the goal of achieving optimal health outcomes by recognizing the interconnection between people, animals, plants, and their shared environment.

The webinar is aimed at bringing academics, researchers and practitioners working on Climate Change and One Health India and South Africa and share their experiences.

The event is being organized by the two affiliate groups of JBI from India and South Africa. JBI is a global organisation promoting and supporting evidence-based decisions that improve health and health service delivery. JBI offers a unique range of solutions to access, appraise and apply the best available evidence.
