# V/Q lung imaging

- Perfusion imaging with Tc-99m MAA
- Ventilation imaging
  - Kr-81m
  - Tc-99m aerosol
  - Tc-99m smoke technegas
- New work with SPECT

# Normal V/Q

# Criteria for diagnosis

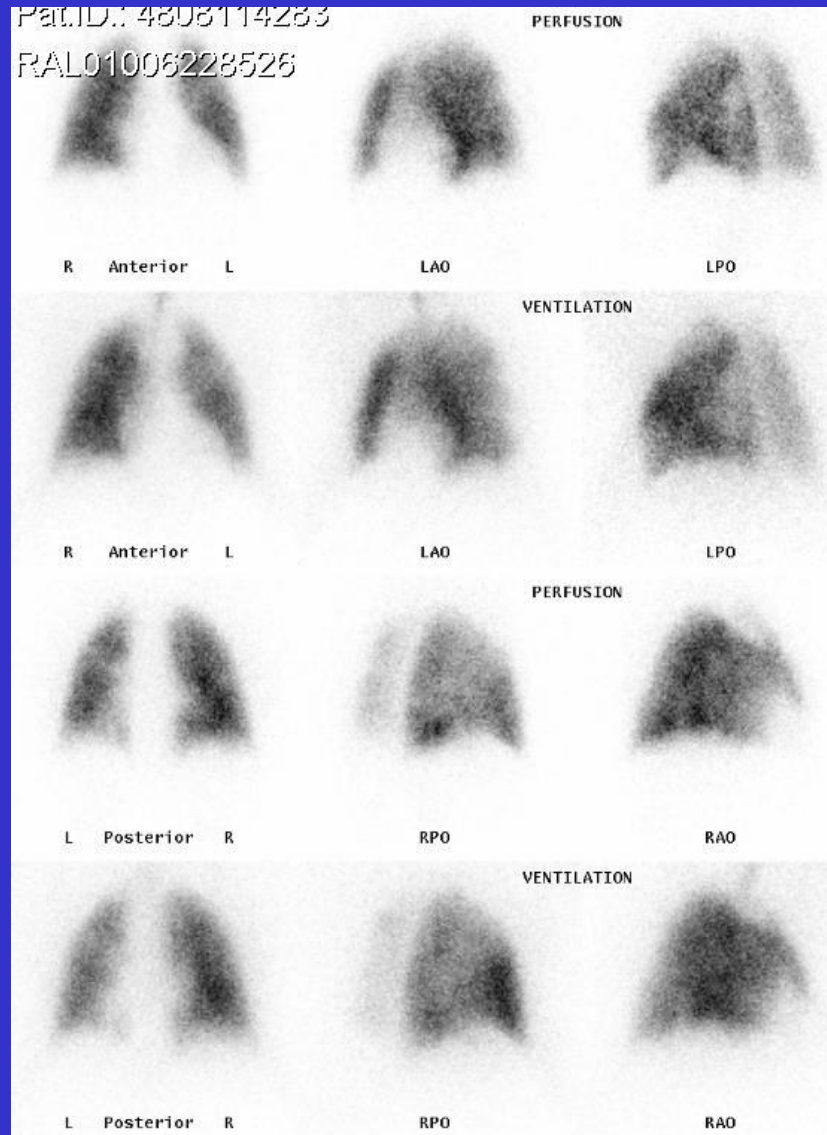

## Biello, PLODED

- |                            |                                  |
|----------------------------|----------------------------------|
| • Normal                   | High                             |
| • Low probability          | more than 2 segments V/Q defects |
| – 1x segmental V/Q defect  | in both lungs                    |
| – <5%                      | Lobar V/Q defect                 |
| • Indeterminate            | >95%                             |
| – 2x segmental V/Q defects |                                  |
| – Abnormal ventilation     |                                  |
| – 5-95%                    |                                  |

# CTPA or V/Q

- CT Radiologists concerned at being inundated with requests for CTPA
- Concern over radiation dose (CTPA breast dose 4mSv, V/Q <1mSv)
- During normal working hours nuclear medicine acts as 'gate keeper' for CTPA
- Those with equivocal V/Q, known lung disease or abnormal CXR are considered for CTPA

6 moths use of  
V/Q imaging  
Cambridge

Suspected PE  
(n=347)

V/Q

CTPA

Total V/Q

N=272

Total CTPA

N= 98

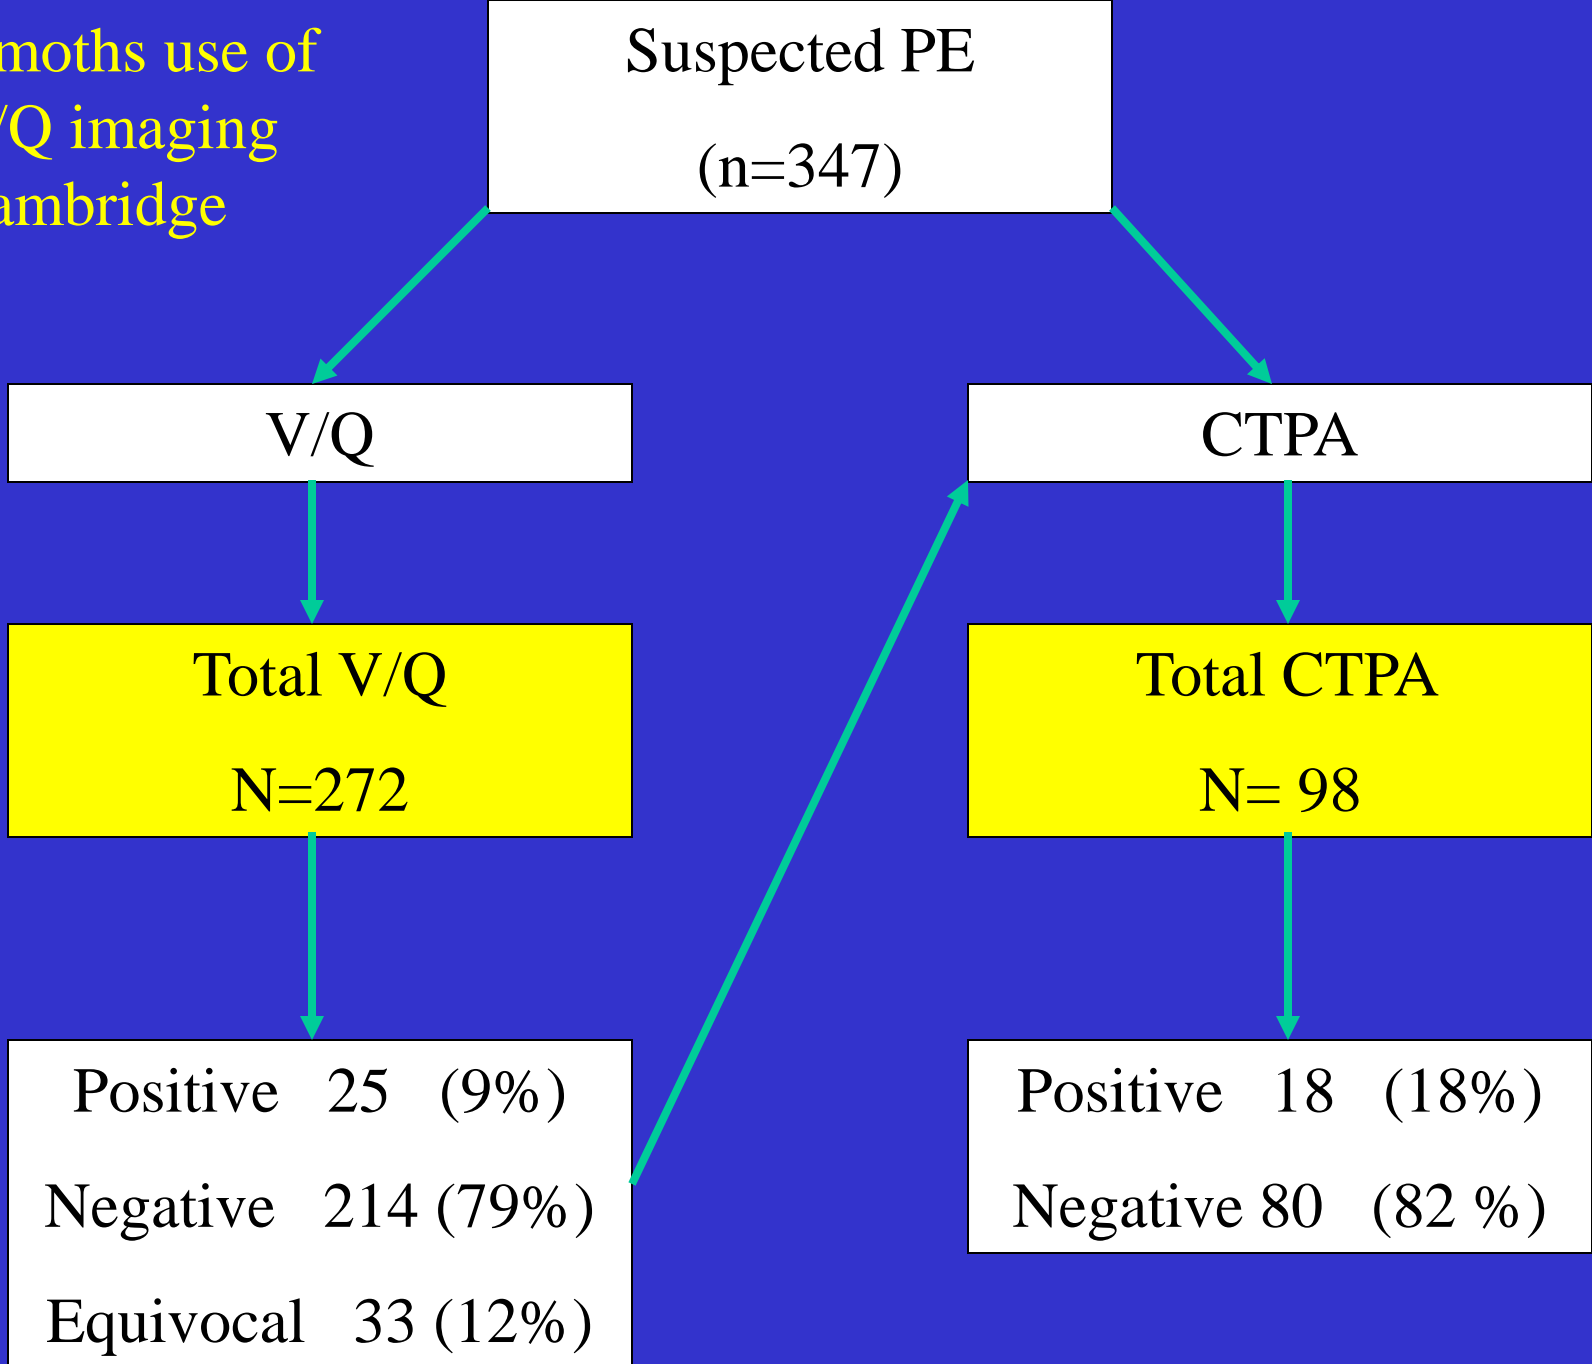

Positive 25 (9%)

Negative 214 (79%)

Equivocal 33 (12%)

Positive 18 (18%)

Negative 80 (82 %)

# Results

39 PEs diagnosed (1.5 per week)

- 25 diagnosed by initial V/Q
- 9 diagnosed by initial CTPA
- 6 diagnosed by CTPA after initial V/Q
- 1 False positive on V/Q v CTPA

# VQ Scans (Sept 02 - Feb 03)

# CTPAs (Sept 02 - Feb 03)

# V/Q SPECT

- Recommended by EANM for diagnosing PEs
- Developed by Baljic et al
- Reduces the rate of equivocal results
- However technically difficult
- High dose with Kr-81m

# PE

# COAD

# V/Q SPECT with Kr-81m-PE

# V/Q SPECT with Kr-81m flu

# DTPA aerosol

- Developed by O'Doherty
- Works of the principle of increased permeability if alveolar wall damaged
- Permeability is defined as
  - Flow of molecules/unit area
  - Conc gradient across membrane

# Lung permeability

# DTPA clearance

# Abnormal and normal
