BScHons Toegepaste Wetenskap Meganika: Fisiese Batebestuur (12243037)

Minimum duur van studie 1 jaar

Totale krediete 128

Programinligting

*Hierdie inligting is slegs in Engels beskikbaar.

This multidisciplinary programme exposes students to both the management as well as the technical aspects of Physical Asset Management from a theoretical perspective. Students will, however, have to choose whether they would prefer to conduct the research component of the programme in either the technical domain (register with the Department of Mechanical and Aeronautical Engineering) or in the management domain (register with the Graduate School of Technology Management).

Ander programspesifieke inligting

The curriculum comprises four core modules, two elective modules and a compulsory research project.

Any specific module is offered on the condition that a minimum number of students are registered for the module, as determined by the head of department and the Dean.

Eksamens en slaagvereistes

Also consult the Faculty Rules in this regard.

All the examination admission requirements, applicable to the relevant module, must have been met.

Slaag met lof

The degree is conferred with distinction if students obtain a weighted average of at least 75% in all the required modules for the programme. The degree is not awarded with distinction if any one module is failed (excluding modules which were discontinued timeously).

Kurrikulum: Finale jaar

Minimum krediete: 128

Kernmodules

Instandhoudingspraktyk 780 (MIP 780)

Module-inhoud:

*Hierdie inligting is slegs in Engels beskikbaar.

Failure characteristics and analysis. Maintenance economics – Budgeting and cost control. Life cycle partnering and maintenance contracting. Legal aspects and case study. Performance measurement and benchmarking. Maintenance programming – Network analysis. Variability analysis. Maintenance strategy, plan, and protocol design – a new look at RCM. Maintenance tactic selection techniques. Introduction to condition-based maintenance. Tribology and contamination control presented with case studies. Maintenance Maturity Indexing and Variable Relationships development.

Module-inhoud:

*Hierdie inligting is slegs in Engels beskikbaar.

Review of the fundamentals of thermodynamics. Introduction to compressible flows. Advanced topics in compressible flows: transonic flow and supersonic flow. Oblique shock waves, expansion waves, shock-expansion theory, wave interactions and wave drag. Linearized compressible-flow theory. Effects of heat and friction on gas flow. Design aspects of high speed aeroplanes and viscous effects. Fundamentals of hypersonic flow and high temperature gas dynamics. On completion of this module the student will be able to understand the fundamental phenomena associated with compressible flow and competently apply analytical theory to compressible flow problems

Navorsingstudie 732 (MSS 732)

Module-inhoud:

*Hierdie inligting is slegs in Engels beskikbaar.

This module allows a student to do research on a certain topic in mechanical or aeronautical engineering, as specified by a lecturer in the Department of Mechanical and Aeronautical Engineering, on an individual basis, under the supervision of that lecturer. The study should be seen as a precursor to the master's degree research that may follow the honours degree. The total volume of work that is to be invested in this module by an average student must be 320 hours. The body of knowledge studied must be of an advanced nature, at the level of the other postgraduate modules offered by the Department. Normal requirements for assessment that include the use of an external examiner apply to this module also.
